Create this adorable pirate ship craft with a free template! When youre done, check out this toilet paper roll castle to add to the fun! This post contains affiliate links. We feature a lot of beautiful crafts with all kinds of fun materials on this site, but sometimes the biggest winner is when you can use ordinary materials you already have to make
something youll have fun using. Here, we use simple paper and objects that could be mistaken for trash, and the end result is instantly playable. This pirate ship is not actually seaworthy since its made from a tube, kids can even stick little people
inside for transport. You can even experiment with it in the bath, just be aware that it might be a single-use endeavor! You can also make a second ship for the good guys by just leaving off the pirate flag or designing your own flag using different colors. This craft is based on a cardboard tube. When I was a kid, empty toilet paper tubes were a crafting
staple. They were almost endlessly available, and there were equally endless things to do with them. These days, many people are more wary about hygiene and less encouraging of their kids playing with bathroom garbage. If thats you, dont worry there are many other ways to enjoy the same crafts. Some ideas: Amazon sells the same kind of tubes
without the toilet paper. They are actually stronger. You can use paper towel rolls from the kitchen or elsewhere, just cut them down to size if the instructions are made for toilet paper, aluminum foil, etc. You can make your own tubes by rolling up cardstock or thin
cardboard and gluing or taping it closed Empty a toilet paper roll before it goes into the bathroom by pre-cutting the toilet paper into sheets of 2-3 squares. This can also be a great lifestyle fit if you have a little one who likes unraveling the roll for fun, or family members who tend to waste too much paper. Personally, I think its well worth the few
minutes of extra effort of preparing the roll in order to engage kids in this classic activity of repurposing household trash by crafting. My kids actually enjoy being the ones to pre-cut toilet paper roll or a purchased craft tube) Colored paper Ruler Scissors Glue (I
like tacky glue because it holds well before it cures) Tape Sticks (such as craft sticks, skewers, mini dowels, or natural sticks) Template you can download and print at the end of this post 1. Cut out all the pictures from the template. For parts that you want to leave white, such as the skull and bones, youre done. For the other pieces, trace the
template onto the colored papers of your choice and cut those out. 2. Glue the window cutouts onto your cardboard roll. 3. Take two sticks for the sails. 4. Glue a paper sail to the top of one of the sticks. You may want to secure it with a piece of tape across the stick as well. 5. Glue the skull and bones onto the flag cutout. 6. Glue the flag and the rest
of the sails onto the sticks. Use tape to secure them as needed. 7. Poke two holes in the top of the cardboard tube to put the sticks through (you may want to help children with this step since it may require some force with a pointy object). 8. Poke the bottoms of the sticks through the holes. Use glue as needed to secure them in place. 9. Glue the
anchor cutout near the windows for a finishing touch. Your cardboard tube pirate ship craft is complete! To download, fill out the form below. Youll be signed up for our free newsletter unsubscribe at any time in the footer of the emails. I respect your privacy and the law and wont share your information with anyone. Ahoy maties! We've got a great
activity for you! If your kids have plans to set sail in dangerous waters or hunt for a hidden treasure, then they're going to need the appropriate vessel. You can't send them out unprepared, so with that in mind, we compiled a list of the best tutorials on how to make a pirate ship out of cardboard boxes. Whateveryour level of craftiness and the zeal of
your pint-sized pirate, we have the ship for you. So get out your eye patch, your hooked hand, and your spyglasswe're about to build a ship. And don't forget to put your little swashbuckler to work! A lack of cooperation would surely mean he or she will have to walk the plank. Want to hear about the best discounts on baby products, toys, craft
materials and all things kid-related? Join our Facebook group for promo codes and secret sales! First up we have Anna, from over at Pattern Me Mommy, who has an absolutely awesome pirate ship tutorial. Her husband Mike took on the project, and not only did it provide the perfect opportunity to spend some QT with their son, at the end of the day
they built a pretty badassship. Although the list of supplies is somewhat daunting (packing tape, rope, wire ring anchor points, drywall screws, pine board, dowel rods), a quick trip to Home Depot and/or Lowe's will provide you with everything you're going to need. Image credit: Pattern Me MommyYou can find another great pirate ship over at

ChaosMichelle from Molly Moo Crafts offers yet another approach to making your pirate ship, and besides the fact that it looks amazing, she made it in less than an hour! Very impressive. We should note though, that your kids won't be able to climb inside this one. This ship is for dolls and action figures only. You're only going to need a handful of
items to do this craft: a cardboard box, of course; a glue gun, a craft knife, a ruler, a pencil and a marker, twine, twigs, and fabric for the sail. If you've got these items on hand, we have the ship for you! Image credit: Molly Moo CraftsAnother option along these lines, i.e. a small pirate ship for your child's toys to play in, comes from Maggie at Red Ted
Art.Unlike the others, she puts her pirate ship together with a medium-sized delivery box and then adds a layer of paper macheto give it more stability. This step is optional, but we think it gives the ship a nice, unique touch. You'll agree that the final product looks pretty darn good! Image credit: Red Ted ArtAmanda Medlinshows us yet another option
for making our own pirate ship. She and her husband and theirkids build a pretty impressive vessel in their tutorial. From the glitter anchor to the PVC pipe sail to the telescope/caon, which shoots out deadly ping pong balls, this option will surely serve as wonderful inspiration. Image credit: Amanda MedlinKate, from Kate's Creative Space, really
pulls out all the stops on her ship. She takes pirate shipbuilding up a notch with an artist's touch, using wood-effect wallpaper to give the ship a "nautical" look, curtain rings to look like life-rings, and a realistic-looking pirate treasure map, complete with singed edges. This is definitely one ship you want to steer clear of should it cross your path. Image
credit: Kate's Creative SpaceAt Weird, Unsocialized Homeschoolers, Stefwho claims not to be craftyshows us how to put together a pretty darn crafty pirate ship any kid would love. You need but a few items: 2 large boxes, duct tape, spray paint, a box cutter and 2 short PVC pipes. We love this tutorial for several reasons. Not only does the ship look
awesome, Stef includes a handful of tips that will come in handy for any pirate shipbuilder and she has some great suggestions for using your ship to create a unique learning experience. Image source: Weird Unsocialized Homeschoolers and last but certainly not least, we'd like to highlight Lorraine's tutorial over at Ikat Bag. In addition to having a
great sense of humor, she skillfully put together an impressive ship with the help of her 3 daughters. It has a wheel, multiple sails, and a perch for the captain's parrot, and although her daughter names it Queen of the Waves (a decidedly un-pirate-y name), it would indubitably commend respect in the most dangerous pirate-infested waters. Image
source: Ikat BagThere's a good chance you'll want your ship to be ready in time for International Talk Like a Pirate Day, which usually falls in September, so start gathering your materials now that you know how to make a pirate ship out of cardboard boxes. What are you waiting for? There are ships to be pillaged and booty to be stolen, you lubbers!
Today, sail the seven seas with your HABA Little Friends and this DIY cardboard Pirate Ship: Step 1: Cut out the
templates for the pirate ship. Trace the ship, large cross section, small cross section, and ship floor templates on cardboard. Note: See below for how notches should look. Step 3: Slide together the ship and the large cross section using the
longer vertical notch of the ship. Then, slide together the ship and the small cross section using the shorter vertical notch of the ship. Note: See below for visual. Step 4: Trace the sail template on a piece of
white paper and cut out the shape. With a bamboo skewer, poke through the paper sail on the top and bottom. Then, poke the skewer into the corrugation of the cardboard. Step 4:Enjoy! Follow @studiorosie on Instagram @habausa for a chance to be featured!
Hi, in this instructable I show you how I made a pirate ship. For this project I used cardboard from pizza boxes, egg cartons, hot glue, thread, super glue and paint. It took me about 5 days to finish, working a couple of hours daily. I started by designing the patterns. I had some idea of what I want to create so I drew the profile of the ship, then the top
view of the deck. The ribs of the ship were a little bit of a guessing game, knowing only two dimensions from the side view and the top view. You can see the result translated in 10 images containing the patterns I will be using in the following steps. All 10 pages are in A4 format (297x210 mm) so try to use them without changing the aspect ratio. My
cardboard was 2 mm thick and used two pieces for each patterns, so the thickness you see there is 4 mm (except for the orange one which is the main line of the boat and made it in 4 layers, 8 mm thick). You may have to adjust some of the patterns if you use a thicker or thinner cardboard. Patterns zipGluing the pieces together should be easy if you
follow the first picture with all the patterns along with the video. Basically the colored 1, 2, 3, 4, 5 pieces are glued to the brown A, B, C, D, E pieces are glued to the brown A, B, C, D, E pieces are the deck and sit on top of everything. Make sure to glue the deck horizontally. I made some long 15 mm stripes of the same 2 mm pizza
boxes cardboard and started gluing them to the framework. I started from the bottom of the ship and worked my way up. I overlaid each piece over the one before just a little bit. Using the green patterns a, b and d, I outlined the railing top view. You can make wider, thicker or thinner. Mine was 15 mm wide and 6 mm thick. I made the pillars gluing 3
small 30x5 mm cardboard pieces together. I added some details using thin stripes of cardboard on the sides. Although these details are not so visible now, they will look great when making the patina. I also added some round and square windows. I needed a stand for the ship so I decided to go for a rocky one, full of textures. I made the stand out of
egg cartons. I broke the carton into smaller irregular pieces and glued them together. This type of carton is easy to bend and glue in any shape you want. I made the main three pillars by rolling and gluing the cardboard until I reached the desired thickness. One pillar is about 20 mm thick. The middle one is the tallest and it has 360 mm, the one in
front has 320 mm and the last one has 220 mm. I made patterns for the sails also. 1a and 1b are for the middle and 3a is for the third pillar. I made the curved sails by gluing two pieces of cardboard together and bending them while the glue is still hot. I used the cutting mat to help along with the
bending. I added threads as best as I could. I am no expert in this so I used some Google images for reference. Even though I had no idea of the correct way this should be done, the threads using super glue. I covered the surface in a dark
color first. This will serve as a base. Make it go in all the cracks and the deepest holes. It will act like a shadow and contrast layer when we add brighter colors. I add a brighter color only to the surface of the texture, gently rubbing the brush with very little pigment so I don't get it in the cracks. On top of that bright color you can add other colors as
well. You can make it brighter and more colorful, it's your choice. I went for a wooden look for the main body of the ship. I painted the sails white first and then added a diluted brown to the source to the contrast layer when we did brighter color only to the sail looked older and used. I hope you liked my instructable and got some inspiration to start your
own projects. Have fun!0 ratings0% found this document useful (0 votes)2K viewsThe document describes how to make a cardboard, hot glue, thread and paint. It takes about 5 days to complete, working a couple hours each day. TheAI-enhanced title and descriptionSaveSave DIY-Cardboard-Pirate-Ship.pdf
